

## TYPE 74

**In 1939, the Type 74 was listed as being CONFIDENTIAL. There was just one set, the 74X, an experimental transmitter.**

**It was a W/T set to do with W/T communications which were higher than normal [at that time] VHF frequencies and using voice [R/T] which had just been perfected by the Admiralty Signal Establishment.**

**We have no information on this set but we do know that the sets were fitted into the *Aurora, Nelson, Renown and Rodney* so it could have had something to do big gun fire control/co-ordination.**
