

1. Radar and IFF sets are distinguished by their digit numbers (except in the case of type 79) followed by one or more letter suffixes.

The first digit is either 2 (early types about 1938-43) or 9 (later types after 1943.)

2. Clues to numbers

(a) 200 Series

Function of set (+ indicates unclassifiable)	Numbers already allocated (other than obsolete sets) indicated by @									
	First Two digits	Last digit (0 = Obsolete)								
	0	1	2	3	4	5	6	7	8	9
Interrogators	24-		0	@	@	@	@			
Transponders	25-		@	0	@		@	@	@	0
X-band sets(267 also on 214 Mc/s +)	26-			@	@				+	@
S-band sets(except 279 on 40 Mc/s +)	27-		@	@	@	@	@	@		+
50 cm sets (except 281 & 286)+	28-	0	+	@	@	@	@	+		@
(291 on 214 Mc/s; 293 on S-band +)	29-	0	+		+	0	0			

(b) 900 Series

GA sets	90-	@	@							
GB sets	91-									
GC sets	92-	@								
GS sets	93-	@	@							
Interrogators	94-	@	@	@	@					
Transponders	95-			@	@					
WA sets	96-	@	@							
WX sets	97-	@	@	@						
WCH sets	98-	@	@							
WC sets	99-	0	0							

3. Clues to letters Suffixes.

Meaning	Letter Suffix
Set modified for supply to Ministry of Supply	A
Set altered from two-mast to one-mast design	B
Set with accurate ranging panel added	R
First major modification	M
Second major modification	P
Third major modification	Q
Set adapted for fixed use on shore	S
Set adapted for transportable use on shore	T
Set adapted for fitting in trawlers & coastal craft	U
Set adapted for fitting in submarines	W
First experimental models of a new type	X
Second " " " " " "	Y
Third " " " " " "	Z
